- 1. (5 points) Indicate the sum of the values corresponding to all statements that are True. Mark 0 if none are True:
 - (1) The best-case performance of finding the smallest element in a BST is $\Theta(1)$
 - (2) A binary heap is a complete BST
 - (4) Any complete tree can be efficiently represented as an array
 - (8) The worst-case performance of finding the largest element of a BST is $\Theta(1)$

1. _____

2. (5 points) Considering the BST below:

What is the output of a preorder traversal that, for each visit, prints the *height* of the node?

- A. 4, 2, 1, 0, 3, 0, 2, 1, 0
- B. None of the others
- C. 3, 2, 1, 0, 4, 3, 2, 1, 0
- D. 4, 2, 1, 1, 3, 0, 2, 1, 0
- E. 4, 2, 1, 1, 4, 3, 2, 1, 0

2. _____

3. (5 points) Indicate the sum of the values corresponding to all statements that are True. Mark 0 if none are True:

- (1) 2^h is the minimum number of nodes in a binary heap of height h
- (2) In a max-heap each key is greater or equal to the keys of all ancestors
- (4) Traversing a BST using *pre-order* results in a sorted list of keys
- (8) A binary heap is a complete binary tree

3. _____

4. (5 points) A post-order traversal of a max-heap with 7 elements is 1, 2, ..., 6, 7. What is the sum of all keys in nodes of height h = 2?

4. _____

5. (5 points) Consider an empty hash table of length 11, in which keys 9, 21, 17, 12, 27, 20, 16, 31 are inserted with $h(x) = (x+7) \mod 11$ and separate chaining. What is the total number of collisions?

5. _____
